Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

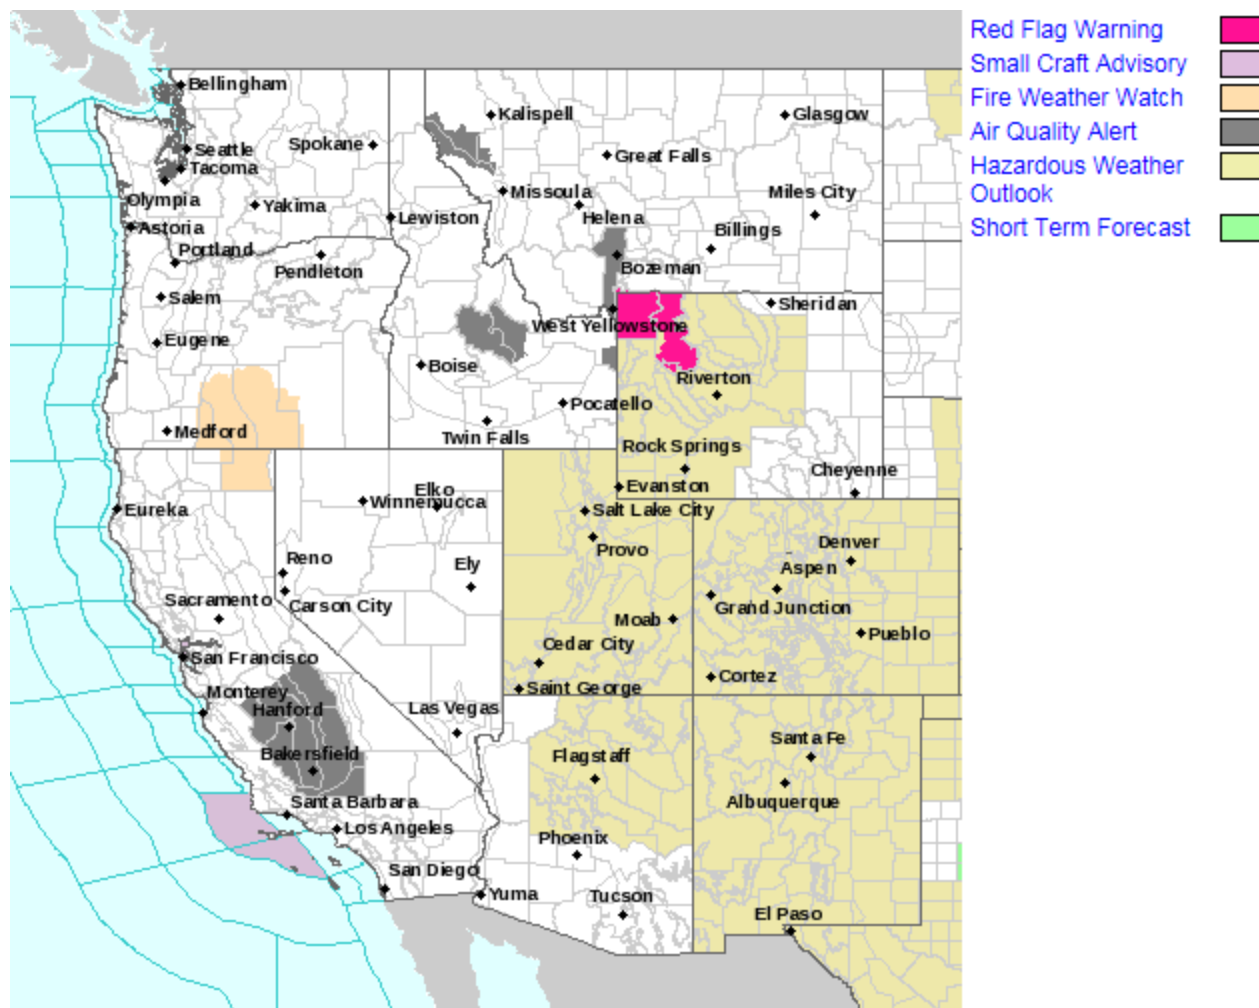

NORTHERN CALIFORNIA

Some periods of gusty winds and low Relative Humidity (RH) for the higher elevations and east of the Cascade/Sierra crest this week, but probably not quite reaching High Risk category of Significant Fire Potential. The weather pattern over Northern California this week will generally be cooler and remain quite dry. Weak high pressure will be over Northern California today with little change in our weather from the past few days as sunny, dry weather prevails again. The marine layer near the coast continues to be deep enough (~2000-2500 ft) for low clouds and patchy fog to persist near the coast much of the day and push inland quite a bit overnight. A small weather system off the coast will be moving east Monday then ashore and inland Tuesday. It bring some cloudiness and a very slight chance of some light showers to the northwest portion of the Geographic Area. A broad trough will be over the Northern California region the rest of the week into next weekend. Temperatures will be somewhat below normal, and there may be some light showers over the northern areas at times, although Friday looks dry there. No thunderstorms are expected over the next week. This week's trough will also generate periods of gusty S to SW winds over the higher elevations and during some afternoons east of the Cascade/Sierra crest. The most favorable days for this appear to be Monday and then again with a little stronger speeds at the end of the week. Gusts of 25-35 mph may become fairly common in the favored areas. With the RH likely to become higher by the end of the week as well, a major increase in Significant Fire potential is not expected at this time. Our warmest inland valleys will be in the 90s for the next few days which is very seasonable, but they will drop to below normal at around 90 later this week. Low afternoon RH inland (10-15%) and rather poor overnight recovery particularly on the mid and upper slopes (30-45%, locally lower) will also continue into mid week before we see much change.

SOUTHERN CALIFORNIA

Hot and very dry Monday and Tuesday. Windy and very dry across the mountains and deserts Wednesday through next weekend. High pressure centered off the Southern California Coast will cause temperatures to warm 5 to 10 degrees each day away from the coast through Monday. Maximum temperatures will be in the upper 70s and 80s across the mountains with upper 80s and 90s in the valleys today and then it will warm to the mid 80s to mid 90s across the mountains and mid 90s to 105 in the valleys both Monday and Tuesday. Minimum humidity will be 12% to 25% away from the coastal areas today and then drop into the single digits and teens both Monday and Tuesday. Local northwest to north night winds of 15 to 25 mph with gusts to 40 mph will surface across the Santa Ynez Range and the Grapevine through Tuesday. A Pacific trough will develop over the West Coast bringing south to west afternoon winds of 15 to 30 mph with gusts to 50 mph to the Kern County Mountains, Antelope Valley, and Banning Pass Wednesday afternoon through next weekend. This trough will also bring a significant cooling trend to the region Wednesday through next weekend. The marine layer will deepen starting Wednesday, with morning low clouds making it into most coastal valley locations by Thursday morning. Minimum humidity will stay in the single digits and teens above the marine layer Wednesday through next weekend.
